DETAILED ACTION

Drawings

1. The drawings are objected to as failing to comply with 37 CFR 1.84(p)(5) because they do not include the following reference sign(s) mentioned in the description: inlet (3), outlet (4), stator (5), longitudinal slots (9), front storage chamber (17), rear storage chamber (12), rotor (8), a slide ring packing (18). A proposed drawing correction or corrected drawings are required in reply to the Office action to avoid abandonment of the application. The objection to the drawings will not be held in abeyance.

Claim Rejections - 35 USC § 112

1a. Claims 1-6 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

As to claims 1-6, applicant did not indicate the structural features, such as, a stator, longitudinal slots, a conveyor worms, a front storage chamber, an inlet, an outlet, slide ring packing, and a rear storage, in the drawings.

Claim Rejections - 35 USC § 102

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

Art Unit: 1725

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

3. Claims 1-6 are rejected under 35 U.S.C. 102(b) as being anticipated by DE 39 19828 A1.

As best understood based on the above informalities described in paragraphs 1 and 2, DE '828 discloses applicant's claimed invention to a loop type reactor column comprising a reactor housing, an inlet and an outlet, a stator and a rotor. The rotor and stator are arranged in the portion of the mixing chamber and each rotor having at least one hollow cylinder provided with slots. In addition, a guide tube is arranged in the mixing chamber. A conveyor (best understood by examiner to be a transporting means of the product, a dynamic mixer) is within the mixing chamber and controlled by a common shaft. The guide tubes for the conveyor worm terminates in the area of the inlet. The inlet, guide tube, rotor, stator, and metal guides are arranged centrally in the mixing chamber (figure and abstract).
